SUMMARY

Computer Science graduate focused on full-stack development, with production experience building and maintaining live web applications using Next.js, PostgreSQL, and REST APIs - Including a commercial cafe-management platform in active paid use. and have some experience in Python

SKILLS

Languages

C++, JavaScript, PHP, Next.js,

Database

MySQL, Database Design,
Query Handling

Core Workflow

Admin Dashboards, Order
Management, Menu
Management, API Integration,
Database-Backed Applications

Frontend

HTML, CSS, Bootstrap,
Responsive Design, React.js
Basics

Tools

GitHub, VS Code, Figma, Excel

Backend

PHP, REST APIs, CRUD
Operations, Authentication
Basics

Deployment

DNS Configuration, Domain
Setup, Production Hosting,
Server Deployment

PROJECTS

Brewberry-Cafe management platform 🔗

- Built and maintain a production restaurant-management platform (Next.js, PostgreSQL) live in a working cafe for 2+ months on a paid maintenance contract, handling all daily order volume with zero customer complaints.
- Designed a secure admin dashboard with 2FA authentication, dynamic table/menu management, and role-based order control.
- Built a configurable loyalty engine — owner-defined point accrual rates and automatic discount thresholds — plus multi-coupon generation.
- Built an analytics layer: daily sales summaries, monthly best-seller breakdowns, revenue visualizations, and owner-configurable margin inputs for automated profit analysis.
- Implemented a 3-stage order lifecycle (placed → preparing → ready) with live status sync to the customer app, per-table QR ordering, and manual walk-in order entry for staff.
- Added a 4-question post-checkout review flow feeding directly into the analytics dashboard.

News App (Android, REST APIs)

- Built an Android news app that fetches real-time articles from external REST APIs and displays category-wise news.
- Parsed JSON API responses and rendered dynamic article data including headlines, descriptions, images, and source details.
- Designed XML-based screens for category browsing, article reading, and smooth navigation across sections.

- Added local state handling for saved articles and user interactions.
- Improved readability using structured layouts, clear visual hierarchy, and mobile-first UI design.

Natural Beekeeping Business Website [↗](#)

- Developed and deployed a responsive business website for a natural honey and beekeeping brand.
- Built product-focused landing sections for honey offerings, sustainability messaging, customer trust, and inquiries.
- Created mobile-friendly layouts using HTML, CSS, JavaScript, and Bootstrap.
- Added contact and inquiry sections to support customer communication.
- Configured hosting and DNS for live domain deployment.

CERTIFICATIONS

Data Analytics with tableau Workshop, Jaipur

03/2023

- Learned Tableau dashboarding and data visualization using real-world datasets.
- Created dashboards to convert raw data into actionable visual insights.

Internet of Things Workshop, Jaipur

11/2022

- Built IoT prototypes using sensors, embedded systems, and cloud-based communication platforms.
- Learned practical IoT workflows involving device data collection and cloud communication.

EDUCATION

Swami Keshvanand Institute of Technology, Jaipur

2021 – 2025

Bachelor of Technology in Computer Science Engineering

St. Paul's Sr. Sec. School, Banswara

2007 – 2020

Senior Secondary Education

ACHIEVEMENTS & EXTRACURRICULARS

Logistics Manager

- Managed event logistics for 300+ participants, improving coordination, resource planning, and execution efficiency.
- Reduced setup time by 20% through better team coordination, scheduling, and resource allocation.
