SUMMARY

Computer Science graduate focused on full-stack development, with production experience building and maintaining live web applications using Next.js, PostgreSQL, and REST APIs - Including a commercial cafe-management platform in active paid use, plus working knowledge of Python.

SKILLS

Languages

C++, JavaScript, PHP, HTML, CSS

Frontend

Bootstrap, Responsive Design, React.js Basics, Next.js

Backend

PHP, REST APIs, CRUD Operations, Authentication Basics

Database

MySQL, Database Design, Query Handling

Tools

GitHub, VS Code, Figma, Excel

Deployment

DNS Configuration, Domain Setup, Production Hosting, Server Deployment

Core Workflow

Admin Dashboards, Order Management, Menu Management, API Integration, Database-Backed Applications

EXPERIENCE

Brewberry-Cafe management platform

Role- Freelance Full-stack Developer

- Built and maintain a production restaurant-management platform (Next.js, PostgreSQL) live in a working cafe for 2+ months on a paid maintenance contract, handling all daily order volume with zero customer complaints.
- Designed a secure admin dashboard with 2FA authentication, dynamic table/menu management, and role-based order control.
- Built a configurable loyalty engine — owner-defined point accrual rates and automatic discount thresholds — plus multi-coupon generation.
- Built an analytics layer: daily sales summaries, monthly best-seller breakdowns, revenue visualizations, and owner-configurable margin inputs for automated profit analysis.
- Implemented a 3-stage order lifecycle (placed → preparing → ready) with live status sync to the customer app, per-table QR ordering, and manual walk-in order entry for staff.
- Added a 4-question post-checkout review flow feeding directly into the analytics dashboard.

Swastik Industries-Business Ledger & Insights Platform

Role- Freelance Full-stack Developer

- Built and deployed a production ERP system (Next.js, PostgreSQL, REST APIs) for a construction-materials manufacturing business, replacing manual bookkeeping with a live digital ledger handling real purchases, sales, and expense entries.
- Designed a party management module (suppliers/customers) with searchable records by name, phone, and GSTIN, and per-party running balances.
- Built an outstanding-dues engine with automatic aging (e.g., 23-day, 39-day-overdue flags) across both receivables and payables, surfacing net position at a glance.
- Implemented a stock ledger reconciling raw materials against finished goods (opening/in/out/closing) with automated inventory valuation at current selling rates, filterable by financial year.
- Built a multi-partner capital module tracking partner investments, withdrawals, and expenses paid on the business's behalf — keeping financing separate from operating profit.
- Developed a business insights dashboard: gross margin %, cash-in vs cash-out, 30-day revenue/cost trend and 14-day cash-flow charts, top products by revenue, material spend breakdown, and GST/royalty liability tracking.
- Secured the application behind phone number + password authentication for controlled access.

PROJECTS

News App (Android, REST APIs)

- Built an Android news app that fetches real-time articles from external REST APIs and displays category-wise news.
- Parsed JSON API responses and rendered dynamic article data including headlines, descriptions, images, and source details.
- Designed XML-based screens for category browsing, article reading, and smooth navigation across sections.
- Added local state handling for saved articles and user interactions.
- Improved readability using structured layouts, clear visual hierarchy, and mobile-first UI design.

Natural Beekeeping Business Website

- Developed and deployed a responsive business website for a natural honey and beekeeping brand.
- Built product-focused landing sections for honey offerings, sustainability messaging, customer trust, and inquiries.
- Created mobile-friendly layouts using HTML, CSS, JavaScript, and Bootstrap.
- Added contact and inquiry sections to support customer communication.
- Configured hosting and DNS for live domain deployment.

CERTIFICATIONS

Data Analytics with Tableau Workshop, Jaipur

03/2023

- Learned Tableau dashboarding and data visualization using real-world datasets.
- Created dashboards to convert raw data into actionable visual insights.

Internet of Things Workshop, Jaipur

11/2022

- Built IoT prototypes using sensors, embedded systems, and cloud-based communication platforms.

- Learned practical IoT workflows involving device data collection and cloud communication.

EDUCATION	
Swami Keshvanand Institute of Technology, Jaipur	2021 – 2025
<i>Bachelor of Technology in Computer Science Engineering</i>	
St. Paul’s Sr. Sec. School, Banswara	2007 – 2020
<i>Senior Secondary Education</i>	

ACHIEVEMENTS & EXTRACURRICULARS	
Logistics Manager	
• Managed event logistics for 300+ participants, improving coordination, resource planning, and execution efficiency. • Reduced setup time by 20% through better team coordination, scheduling, and resource allocation.
